

## THE ALL BAND HF DOUBLET

(Updated 03/2013)

This antenna project will get you up and running with an all band Hf antenna using one of the oldest and least expensive ham antennas around.....the all band doublet. If you've got some TV twinlead or ladder line laying around and an antenna tuner, some wire, insulators and a bit of time then read on.....Project also includes a novel way of getting the rf to and from the shack using coax rather than ladder line.
